Appendix 24

Have you ever seen a new drop and thought of telling the brand,

“This hoodie design is terrible! please don’t make this”?

And yet... there it is.
On the rack.
In every store.

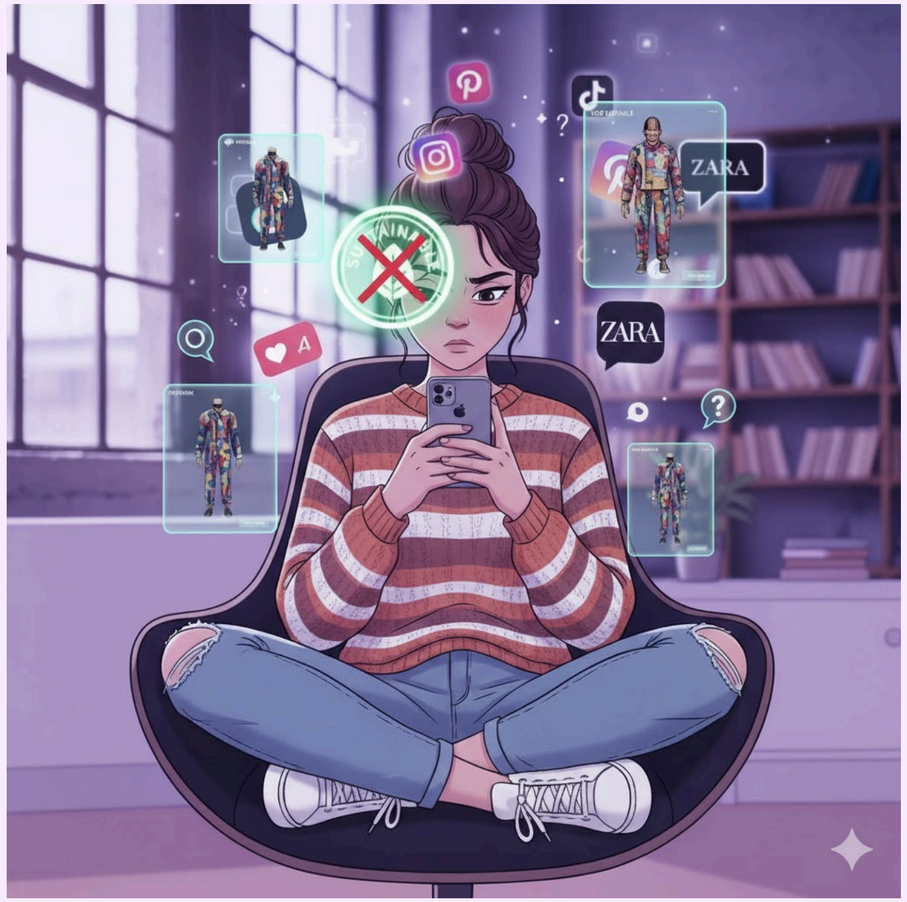
$288 B

in unsold inventory is wasted every year — landfilled, burned, or destroyed.

75%

of new product launches fail due to poor demand prediction.

Major Fashion Disconnect



GEN Z

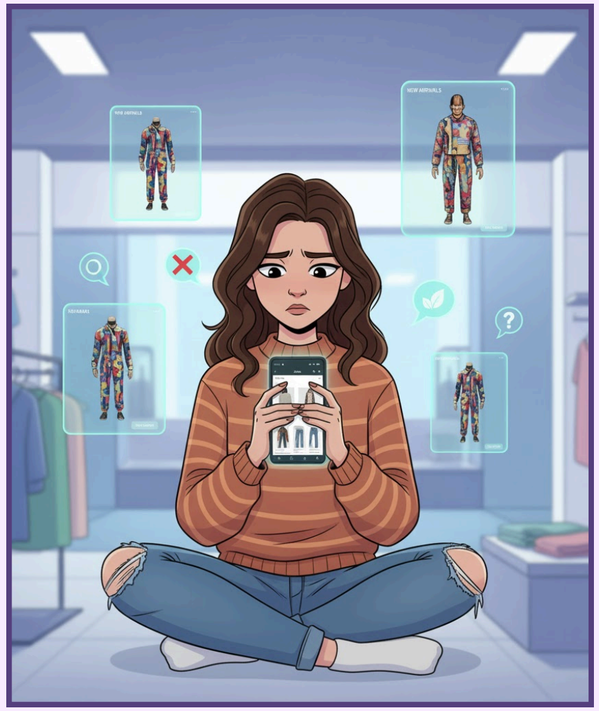
They want to influence what brands make...
But their input goes nowhere.
They don’t trust sustainability claims.

BRANDS

They’re designing with slow, incomplete signals.
They can’t keep up with Gen Z’s fast-moving trends.
Mis-launches are expensive and unsustainable.

Pain-Points

50+ Interviews

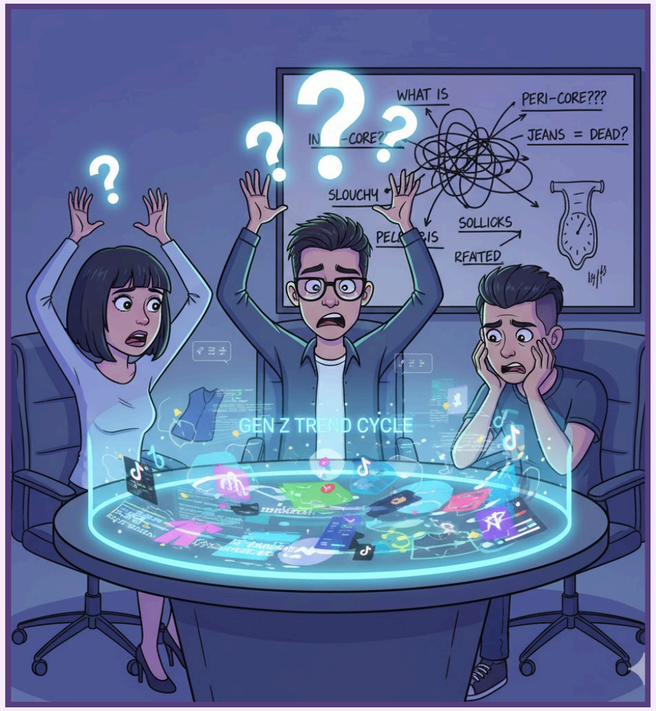


Gen Z feels unheard and disconnected from the product releases

“Sometimes I scroll a Zara drop and I’m just like... who asked for this?”

Gen Z doesn’t trust sustainability claims without clear proof

“Every brand says sustainable now... it feels fake.”



Brands struggle to understand Gen Z’s fast-changing trends in real time

“Feedback usually arrives after release, when we can’t change anything”

Bridge to Solutions

Trend Polls
Swipe. Vote. Shape what brands make next.”

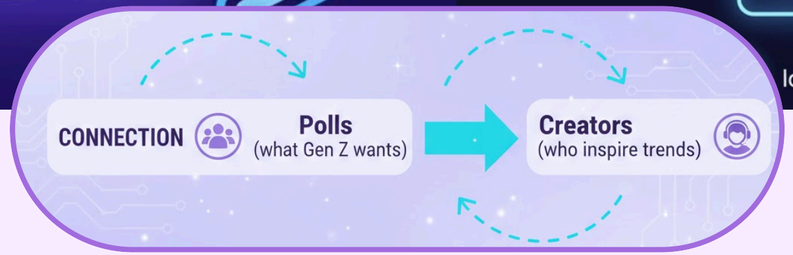
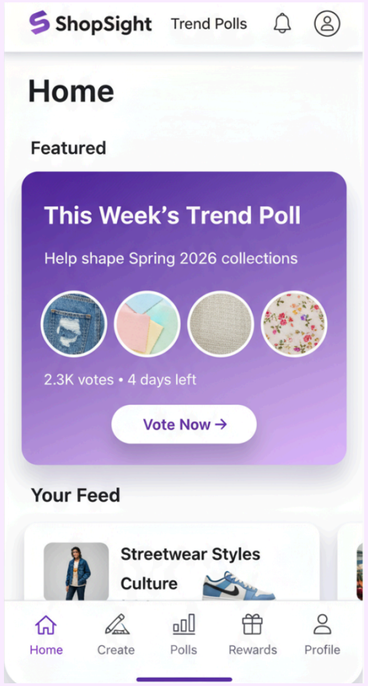
Trend Polls + Creator Spotlight

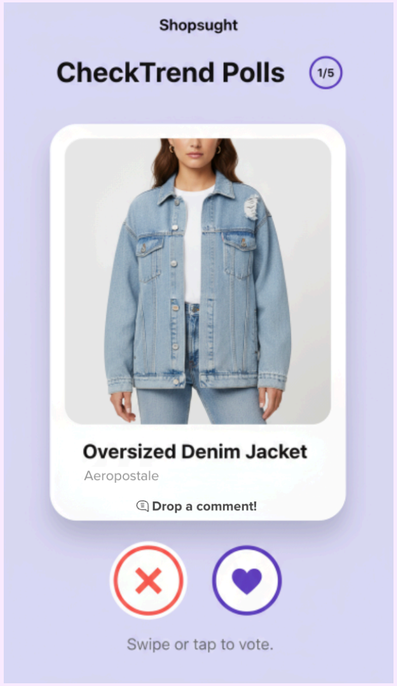


Trend Polls Prototype

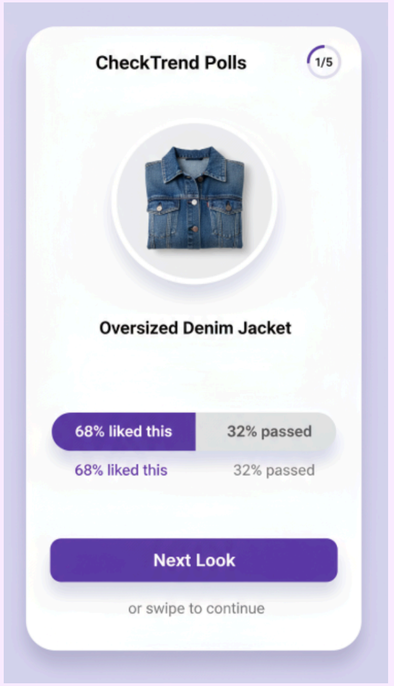


Step 1
Home - user sees a card “This Week’s Trend Poll” or can tap on "Polls" option on bottom nav bar

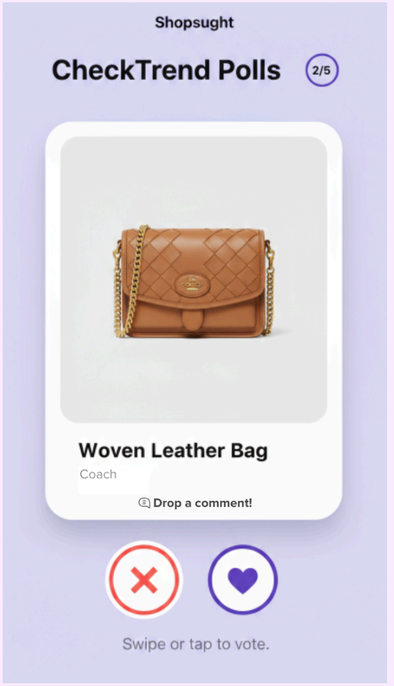
Step 2
Poll Intro -user taps “Start” to begin



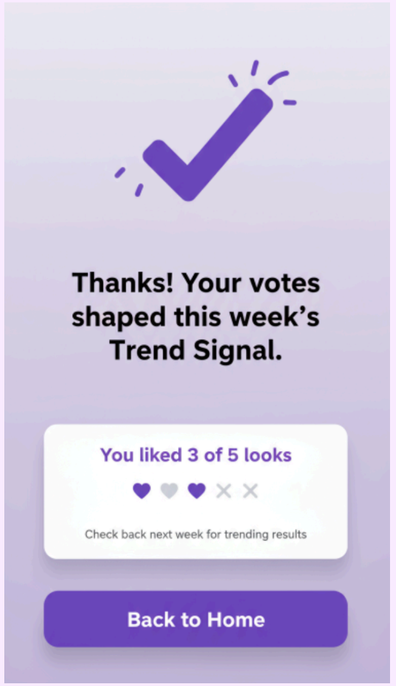
Step 3
Poll Voting Screen • user sees one poll card • user taps a choice or swipes it



Step 4
Results Summary • the card flips and user sees community percentages after they finish (example: 62% picked B) • user can tap on "next look" to go to the next screen or just swipe the current card



Step 5
Next Card • user swipes the flipped card away • next product card slides in automatically



Step 6
Return to Home • user sees small confirmation (points badge OR streak icon updated)

Success Metrics

1

User Metrics

- **Transparency Card Engagement:** % of users who open at least one card on a product page
- **Time Spent Exploring Transparency:** Avg. seconds spent on materials, sustainability, and founder-story sections
- **Trust Lift Score (Before/After Viewing Cards):** Survey-based measure of change in perceived product/brand credibility

2

Brand Metrics

- **Conversion Uplift (A/B Test):** Add-to-cart or purchase rate with transparency cards vs. without
- **Data Completeness Rate:** % of required transparency fields filled by participating brands
- **Early-Signal Accuracy:** % of trend insights that match brand sales or engagement within 4–6 weeks

3

Platform Metrics

- **Feature Retention Rate (Day-7 / Day-30):** Users returning to view transparency-enabled products
- **% of Products With Verified Data:** Indicator of platform trust and brand participation
- **Repeat Brand Participation:** Number of brands that choose to continue using transparency features after the initial pilot.

Why these solutions work together?

strategic gaps

- Trend misalignment
- Trust + transparency gaps
- Lack of recognition + community engagement

Together, they create

- User participation
- Brand decision-making
- Sustainability impact
- Emotional resonance

SWOT Analysis

Strengths

- **High engagement** through interactive trend polls
- **Builds trust** via transparency cards showing real, verified impact
- **Strengthens community** with creator spotlights
- **Fast insights** for brands + strong predictive value
- **Easy to build MVP** with clear scalability

Weaknesses

- **Requires reliable data** from brands to power transparency elements
- **Creator spotlight content** needs ongoing moderation and curation
- Multi-feature system may increase **initial complexity**
- **Band willingness to participate**

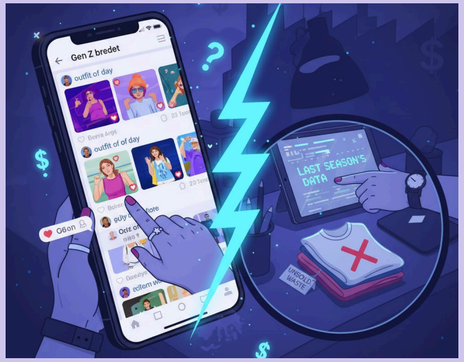
Opportunities

- **Rising Gen Z demand for authenticity** + sustainability proof
- **Expands into brand–consumer co-creation** experiences
- **Potential partnerships** with ethical brands, micro-influencers, and sustainability certifiers

Threats

- **Competitors may introduce** similar trust-driven features
- If brands provide inaccurate data, **trust could be compromised**
- **Shifts in social media** and creator norms could affect engagement
- **Data privacy** or transparency regulation changes

Context



Gen Z and brands are disconnected — fast-moving tastes, low trust in sustainability, and costly mis-launches.

Company

ShopSight — turns Gen Z creativity into real-time insights brands can act on.

Customer

Gen Z creators + shoppers and fashion brands seeking real-time trend signals.

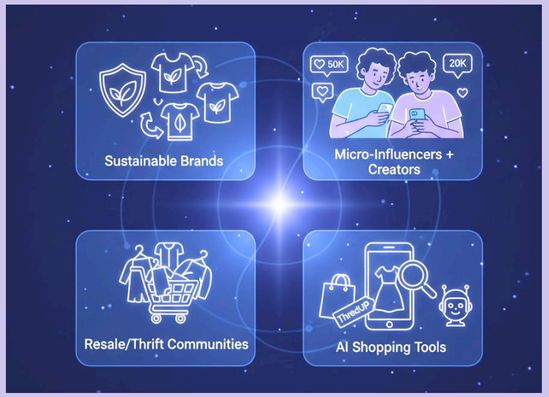
Competitor

WGSN

EDITED™

Trend forecasters (WGSN), AI scanners (Heuritech), retail analytics (EDITED), crowdsourcing (Threadless).

Collaborator



Sustainable brands, micro-influencers, creators, resale/thrift communities, AI shopping tools.

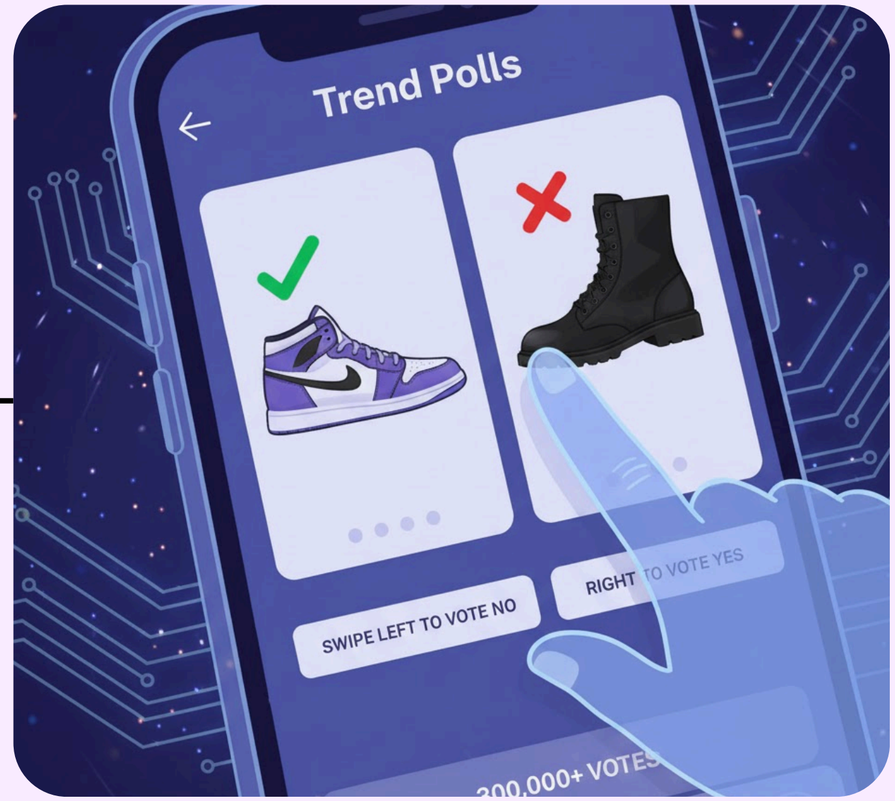
How All Three Work Together?

1

1. Trend Polls (Upstream Insight)

Users shape what brands make next → brands get early demand signals.

Trend Polls
Swipe. Vote. Shape what brands make next."

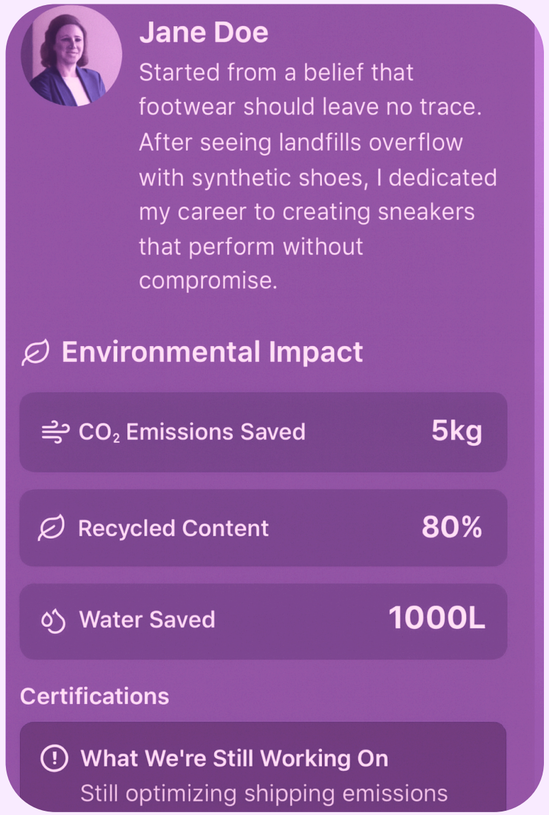


How All Three Work Together?

2. Transparency Cards (Midstream Trust)

When products go live, users get trusted sustainability evidence.

Transparency Cards
One tap. Complete transparency. Instant trust

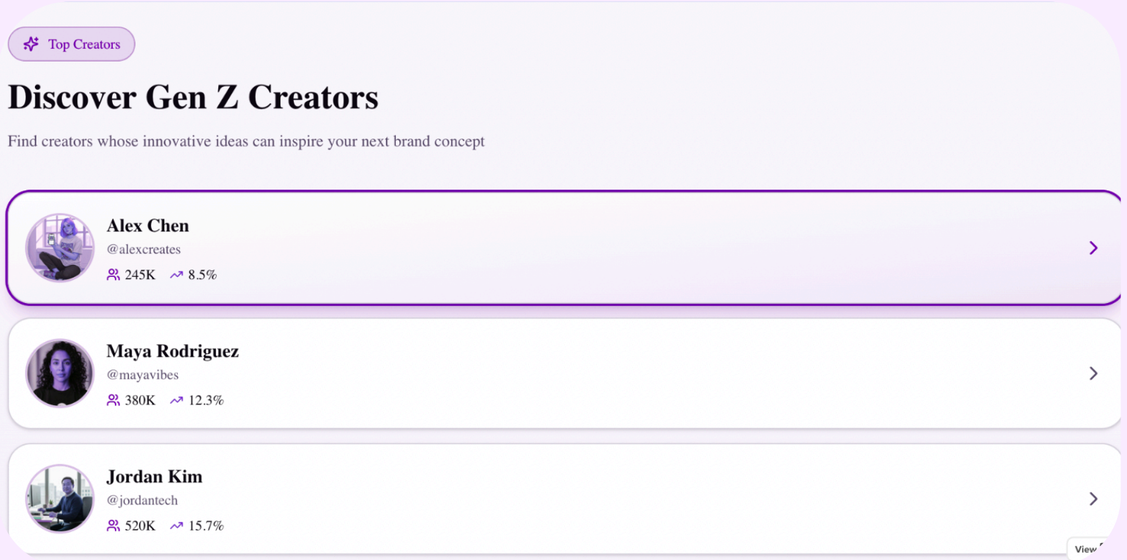


How All Three Work Together?

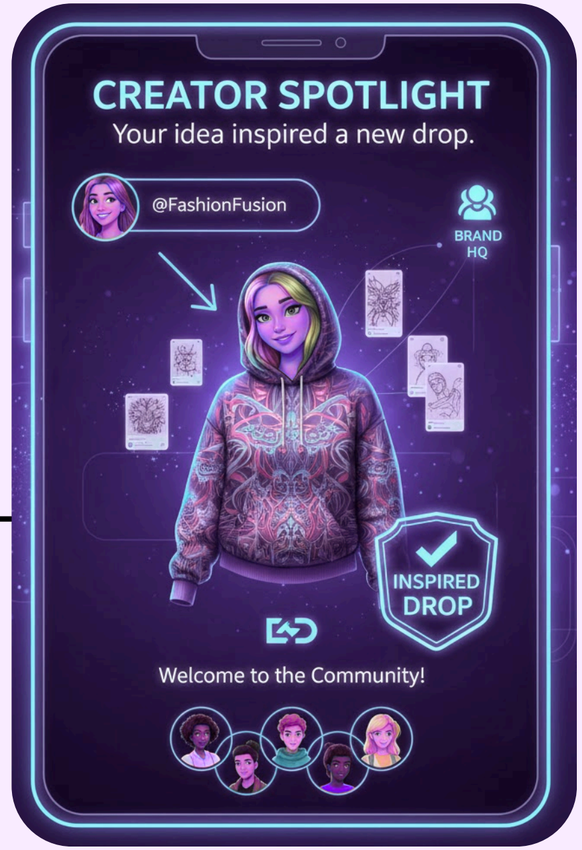
3

3. Creator Spotlight (Downstream Reward)

When ideas influence real launches, users get public recognition.



Creator Spotlight
Your idea inspired a new drop. Welcome to the community.



Takeaway ?

Trend Polls solves demand prediction.

Transparency Cards solves trust & credibility.

Creator Spotlight solves motivation & community.

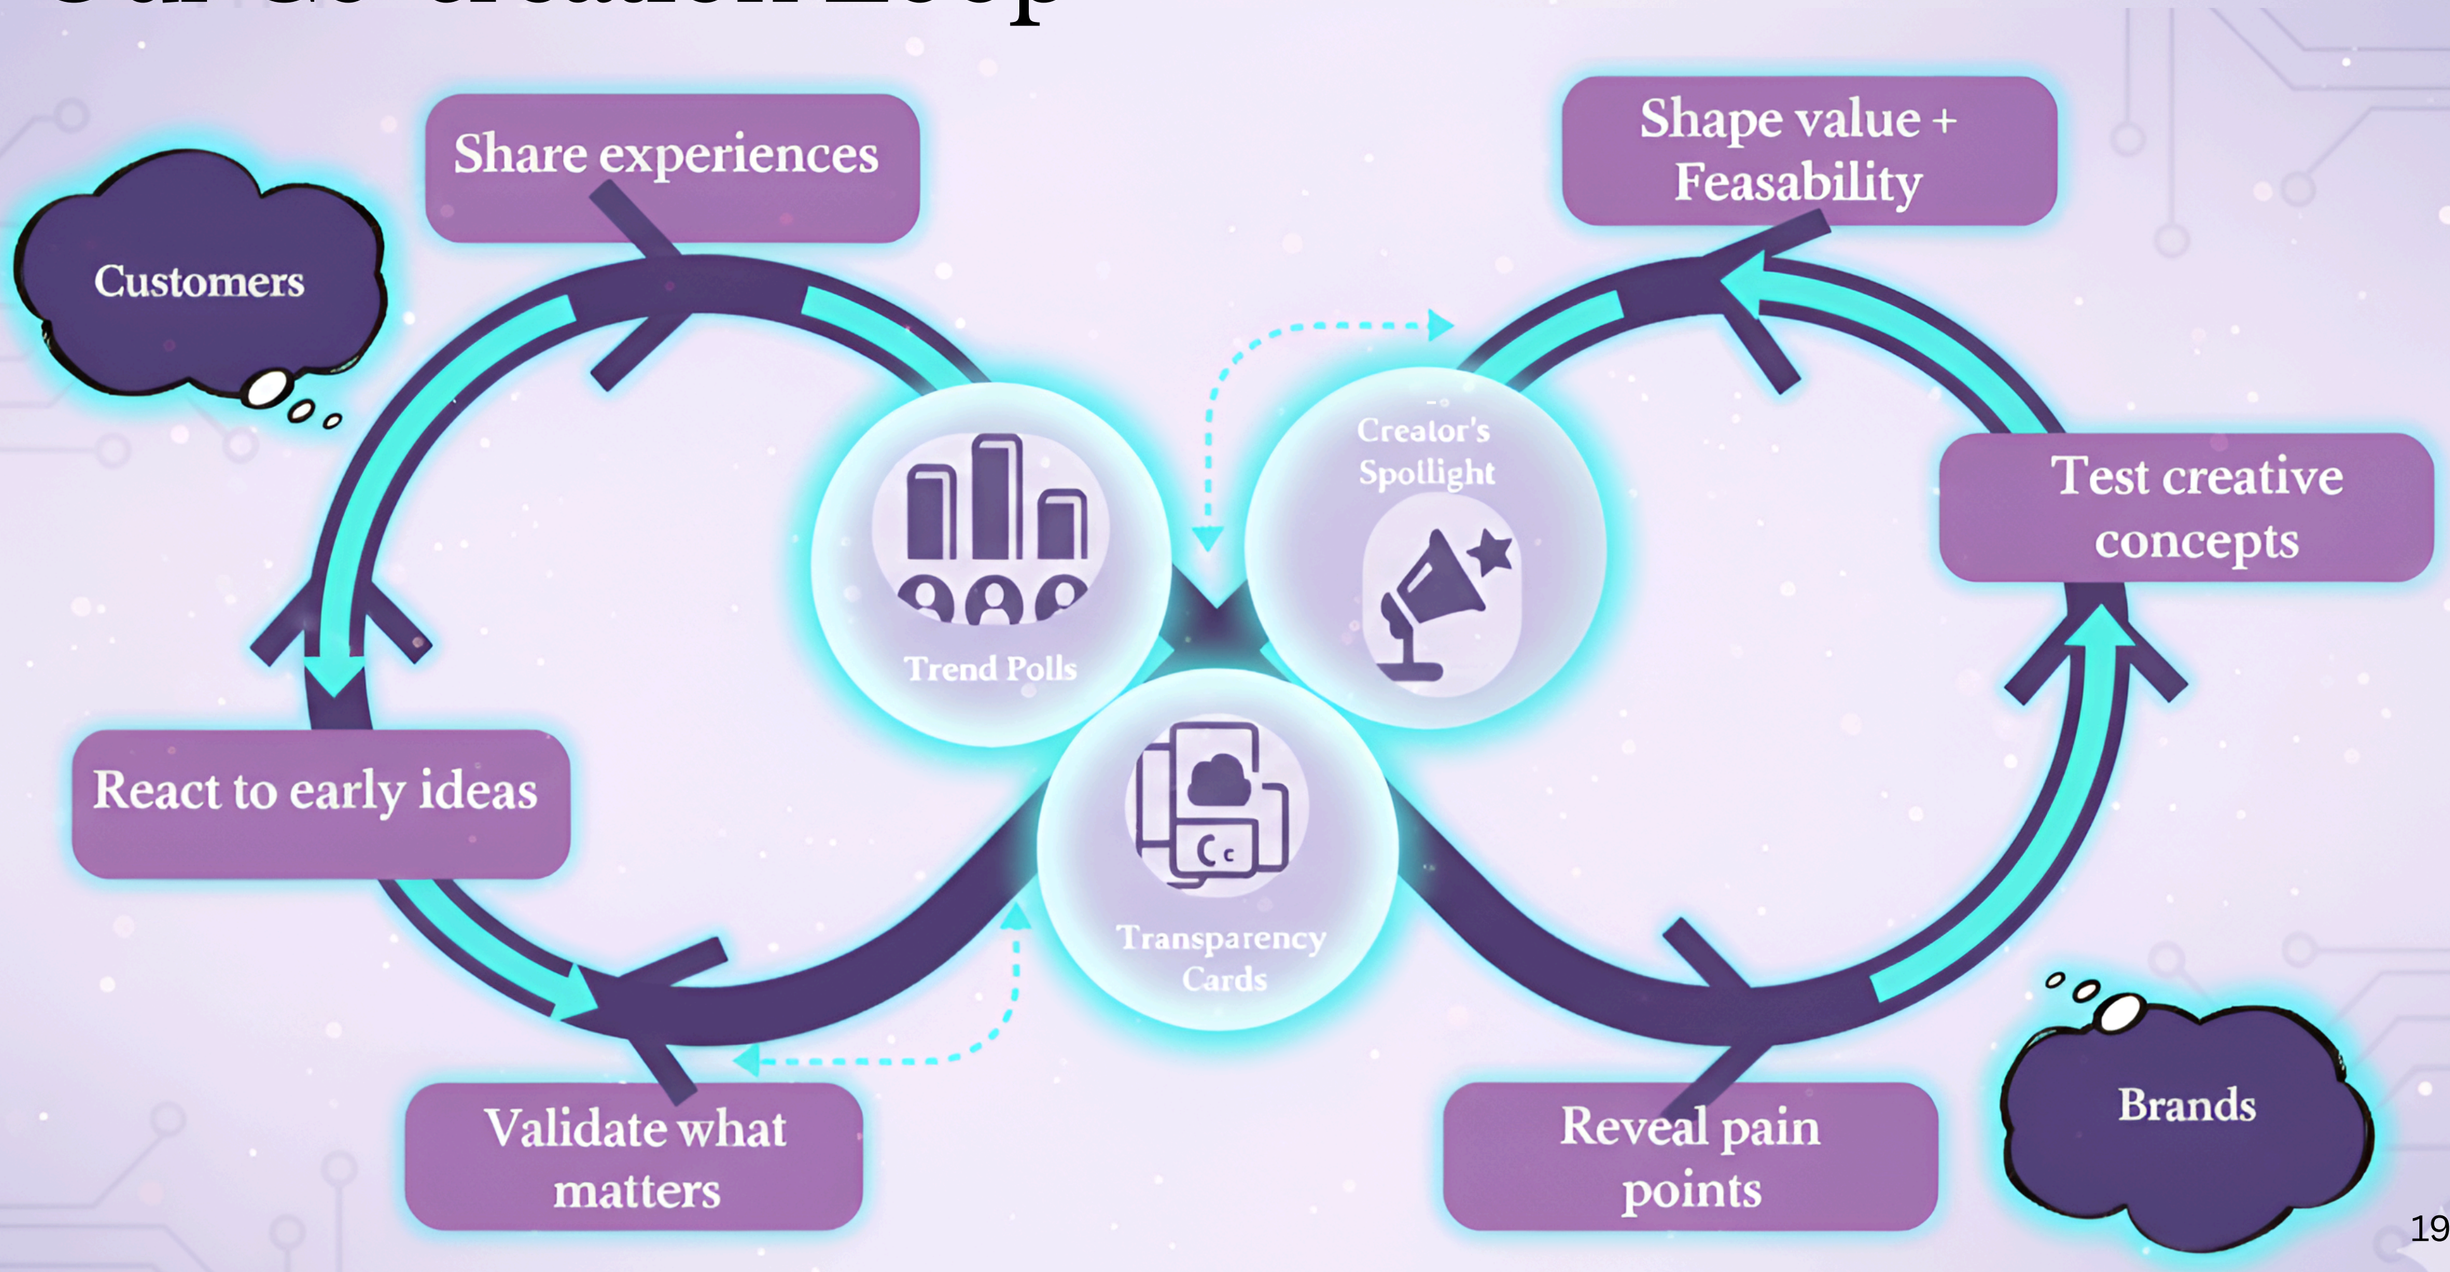
What makes it different?

Together, they deliver:

- Higher user engagement
- Better brand decisions
- Measurable sustainability gains
- Long-term platform loyalty

This is why these three solutions form our recommended strategic direction.

Our Co-creation Loop



Road Ahead...

Phase 1: Validate & Partner

- 15 Gen Z Interviews
- 5 Pilot Brands
- Auditor Partnership

Phase 2: Build MVP

Build Transparency Cards, Trend Polls, and Creator Spotlight Ecosystem

Phase 3: Launch & Scale

Launch with 100 beta testers → Scale to 500+ products, 25+ brands, Go Public!

Thank you!

Questions?

Appendix

Problem Statement

Gen Z is speaking loudly, but brands can't hear them and it's costing the industry relevance, revenue, and trust.

Gen Z wants effortless creative participation, but brands lack real-time visibility into what inspires them.

- Gen Z has ideas, tastes, and trend instincts, but no simple way to express them.
- Brands are forced to rely on delayed reports, guesswork, and reactive forecasting.

Gen Z doesn't feel heard, and brands don't get actionable signals early enough.

- Users feel like their opinions go nowhere.
- Brands struggle to interpret cultural shifts fast enough to shape collections.

Sustainability is important to both, but credibility and clarity are missing.

- Gen Z distrusts vague "green" claims.
- Brands lack a clear, engaging way to communicate true impact and progress.

Fashion is social for Gen Z, but brands can't see these social dynamics.

- Gen Z relies on friends, creators, and community for validation.
- Brands can't access these conversations or understand why trends take off.

There is a growing values gap between what Gen Z cares about and how brands communicate.

- Gen Z prioritizes authenticity and transparency.
- Brands struggle to speak the same emotional language.

Interview Insights & Pain Points

(25 Gen Z users + 25 brand-side stakeholders)

1

Gen Z feels unheard — their input never reaches brands

They share opinions, but nothing changes.

2

Sustainability claims lack trust — Gen Z needs proof, not promises

They want transparency, data, and receipts.

3

Fashion discovery is fragmented and time-consuming

Users jump across platforms to make decision.

4

Social influence drives purchasing more than brand marketing.

Friends, creators, and group chats shape what gets bought.

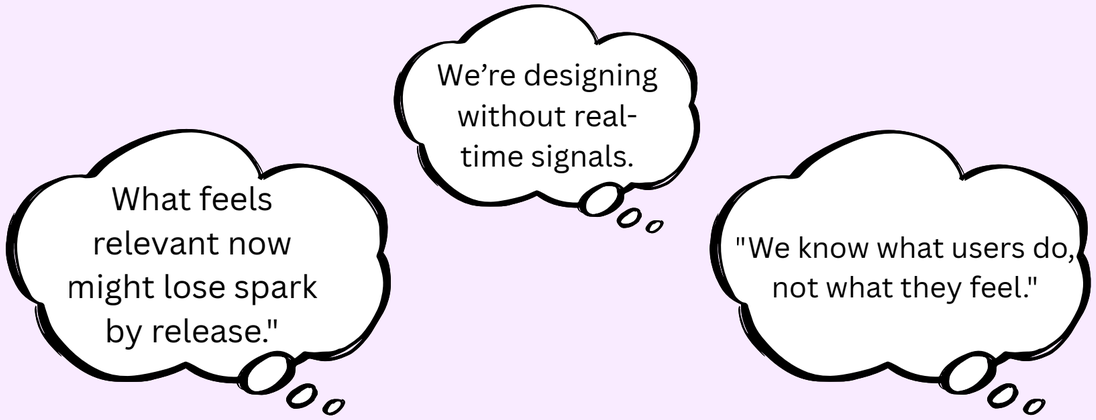
5

Brands lack real-time insight into Gen Z's fast-changing tastes.

Their decisions are based on delayed, incomplete signals.

What Gen Z told us:

What brands told us:



HMW Statements That Led Us Here

HMW make creative participation feel effortless for Gen Z while giving brands deeper, real-time visibility into what inspires and influences them?

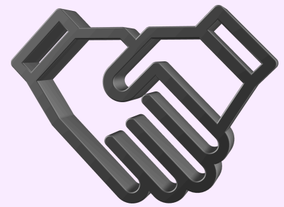
HMW transform the discovery and engagement experience so both Gen Z and brands feel heard, respected, and authentically connected?

HMW strengthen mutual trust between Gen Z users and brands by communicating transparency, values, and impact in ways that feel genuine and measurable?

HMW make sustainability transparent and engaging so Gen Z can make confident choices while enabling brands to communicate impact stories that build long-term trust?

One Tap Changes Everything: Three Strategic Solutions for Conscious Commerce

Gen Z faces research paralysis at checkout. Our three solutions deliver trusted proof on the spot, spark community, and strengthen Shopsight.



Gen Z wants to buy better but gets stuck hunting for trusted info. We propose three simple solutions that unlock confident, ethical choices and build Shopsight’s edge.

Biggest barrier for Gen Z: too much research, not enough trusted facts at the moment of choice. Three solutions solve it and grow Shopsight’s advantage.

Recommendations

Standout

1

Transparency Cards

Expandable product tiles that reveal verified material origins, founder stories, and impact metrics. One tap eliminates Gen Z's research paralysis and builds genuine trust.

Complementary

2

Trend Polls

Swipe-based visual polls where Gen Z votes on designs and trends in real-time. Transforms passive scrolling into active forecasting that reduces brand mislaunch and production waste.

Opportunity

3

Creator Spotlight

A rotating in-app carousel celebrating Gen Z creators whose ideas shaped real brand concepts. Turns inspiration into recognition and drives continuous engagement through community advocacy.

Why Trend Polls? (Problem ➳ Opportunity)

The strategic problem:

Brands currently design 3–12 months ahead with minimal early consumer validation. As a result:

- 30%+ retail inventory becomes excess (Future Earth, 2024)
- Trends shift weekly on TikTok, but brands learn after launch
- Insight tools (WGSN, Heuritech, EDITED) remain reactive, not participatory

The opportunity revealed in our research:

Across interviews with Gen Z shoppers + brand teams:

- Users want to express opinions quickly (no heavy design work)
- They trust peers more than brands; “quick validation loops” drive behavior
- Brands crave emotional feedback early, not post-mortem metrics
- Both sides want real-time signals instead of months-late analytics

Trend Polls turns this gap into an actionable, co-creative insight engine.

The Strategic “Why” Behind the Feature

Aligns with Gen Z digital behavior

They browse visually, swipe, validate with friends → Trend Polls plugs directly into that pattern

Gives brands predictive insight BEFORE manufacturing

This flips the fashion cycle from reactive → proactive

Helps ShopSight stand out vs. competitors

Heuritech = reactive vision AI
WGSN = expert-driven
EDITED = operational analytics

Bridges the trust gap on sustainability

Brands can test eco-materials, recycled fabrics, durability signals before committing.

Why Trend Polls Wins (Prioritization Criteria)

Criteria	Trend Polls Score	Rationale
User Delight	★★★★★	Swipe culture, gamification, easy influence
Brand Value	★★★★★	Live demand signals, emotional tagging
Feasibility	★★★★	Uses existing ShopSight backend & web assets
Differentiation	★★★★★	No competitor offers co-creative trend prediction
Sustainability Impact	★★★★	Reduces mis-launches & product waste

Phase 1:
Validate & Partner
Weeks 1-2

- 15 Gen Z user interviews validating card appeal
- Recruit 5 pilot brands (Patagonia, Allbirds, Reformation, Everlane, 1 emerging)
- Partner with sustainability auditor (B-Corp, Carbon Trust)
- Create brand onboarding guide

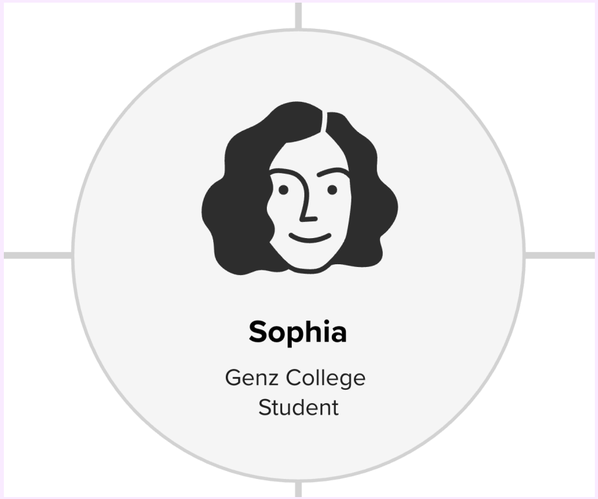
Phase 2:
Build MVP
Weeks 3-7

- Develop expandable card component (React/React Native)
- Build brand admin dashboard (Vibe)
- Integrate auditor API for verification
- Create 50 sample products with complete transparency data

Phase 3:
Beta Launch & Scale
Weeks 7-10

- Launch with 50 products, 100 beta testers
- Monitor 60%+ tap-through, 30%+ conversion lift
- Gather feedback + iterate
- Scale to 500+ products, 25+ brands
- Announce to media

Empathy Map



Says

What have we heard them say?
What can we imagine them saying?

- Websites are kind of difficult to track and manage the cart... mobile apps are always easier.
- If an app doesn't work smoothly, I'm out. You've lost me as a customer
- Amazon portal auto-fetches Chase points... blender was $35 but I paid just $6.
- "Sometimes I like going on the website to see all of the options. If i see a brand i like on instagram for example I'll click on their profile, click on the shop link, and then if i reaaallly like it i will go on the website."

Thinks

What are their wants, needs, hopes, and dreams?
What other thoughts might influence their behavior?

- Peer reviews and family recommendations are more trustworthy than ads.
- Trust real people more than brands when it comes to style.
- Curious about what friends are buying or using.
- Actually influences her circle more than she realized.

Does

What behavior have we observed?
What can we imagine them doing?

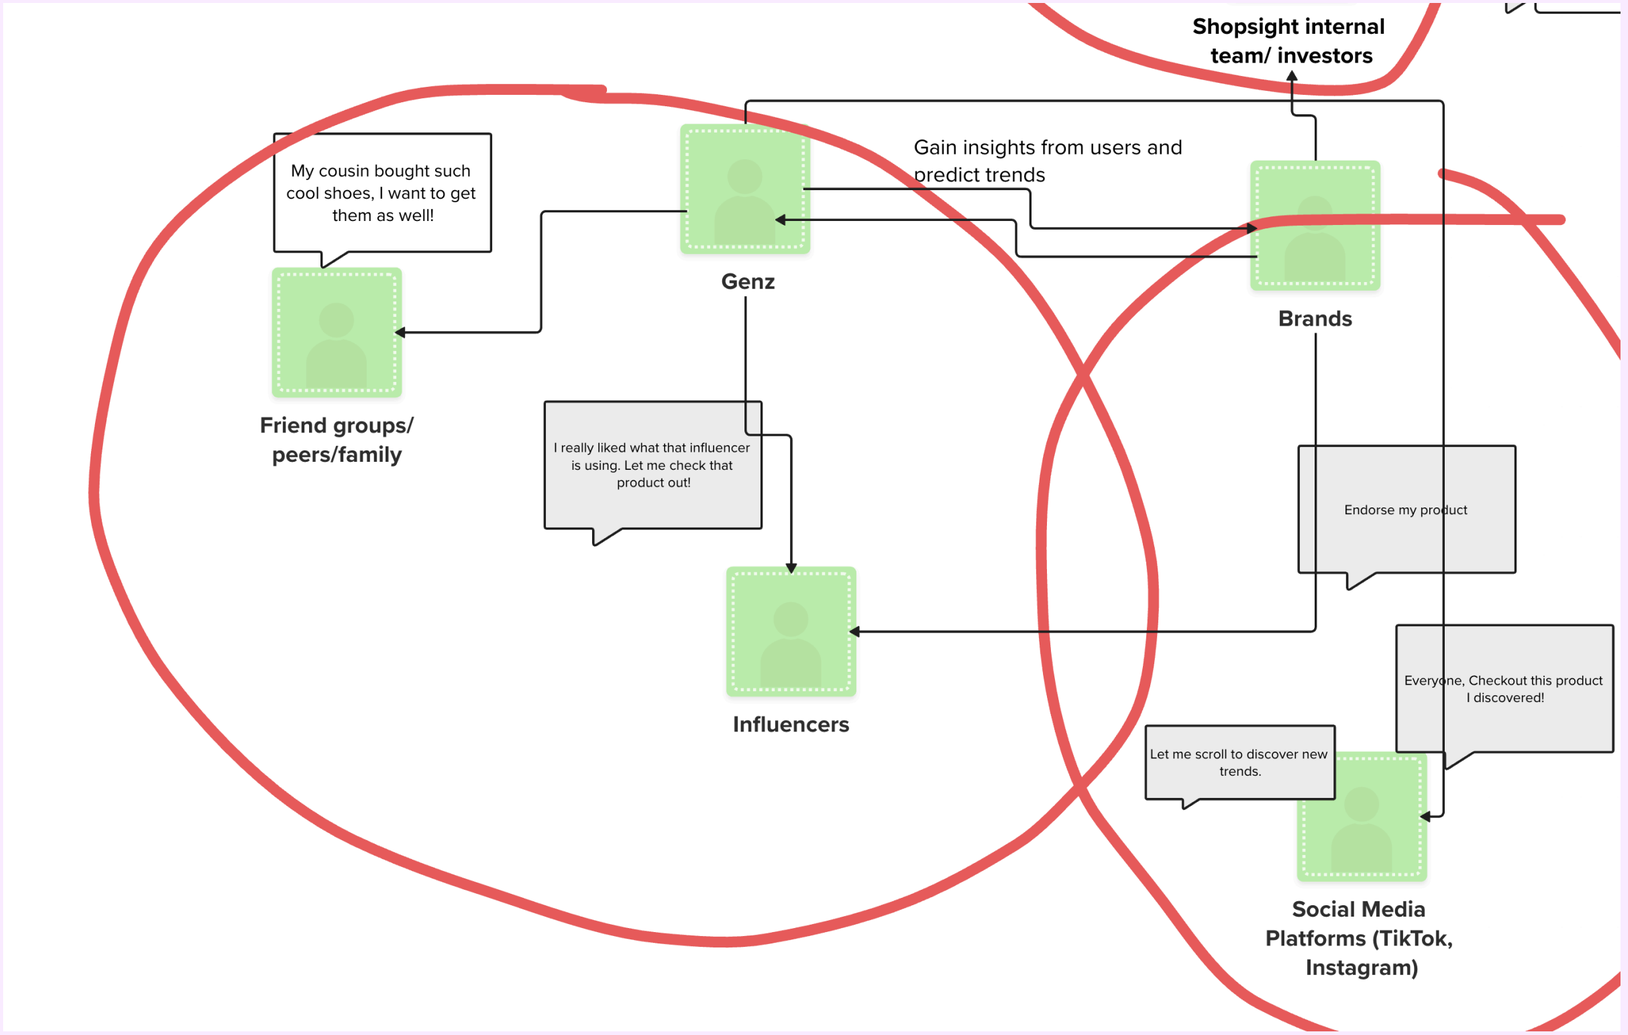
- Researches on YouTube, reads customer reviews before purchase.
- Shares product pics with family/ friends before buying (validation loop).
- Shares interesting purchases or features (like pockets in sarees, sustainable glitter) with friends/family.
- Shares and receives product links through

Feels

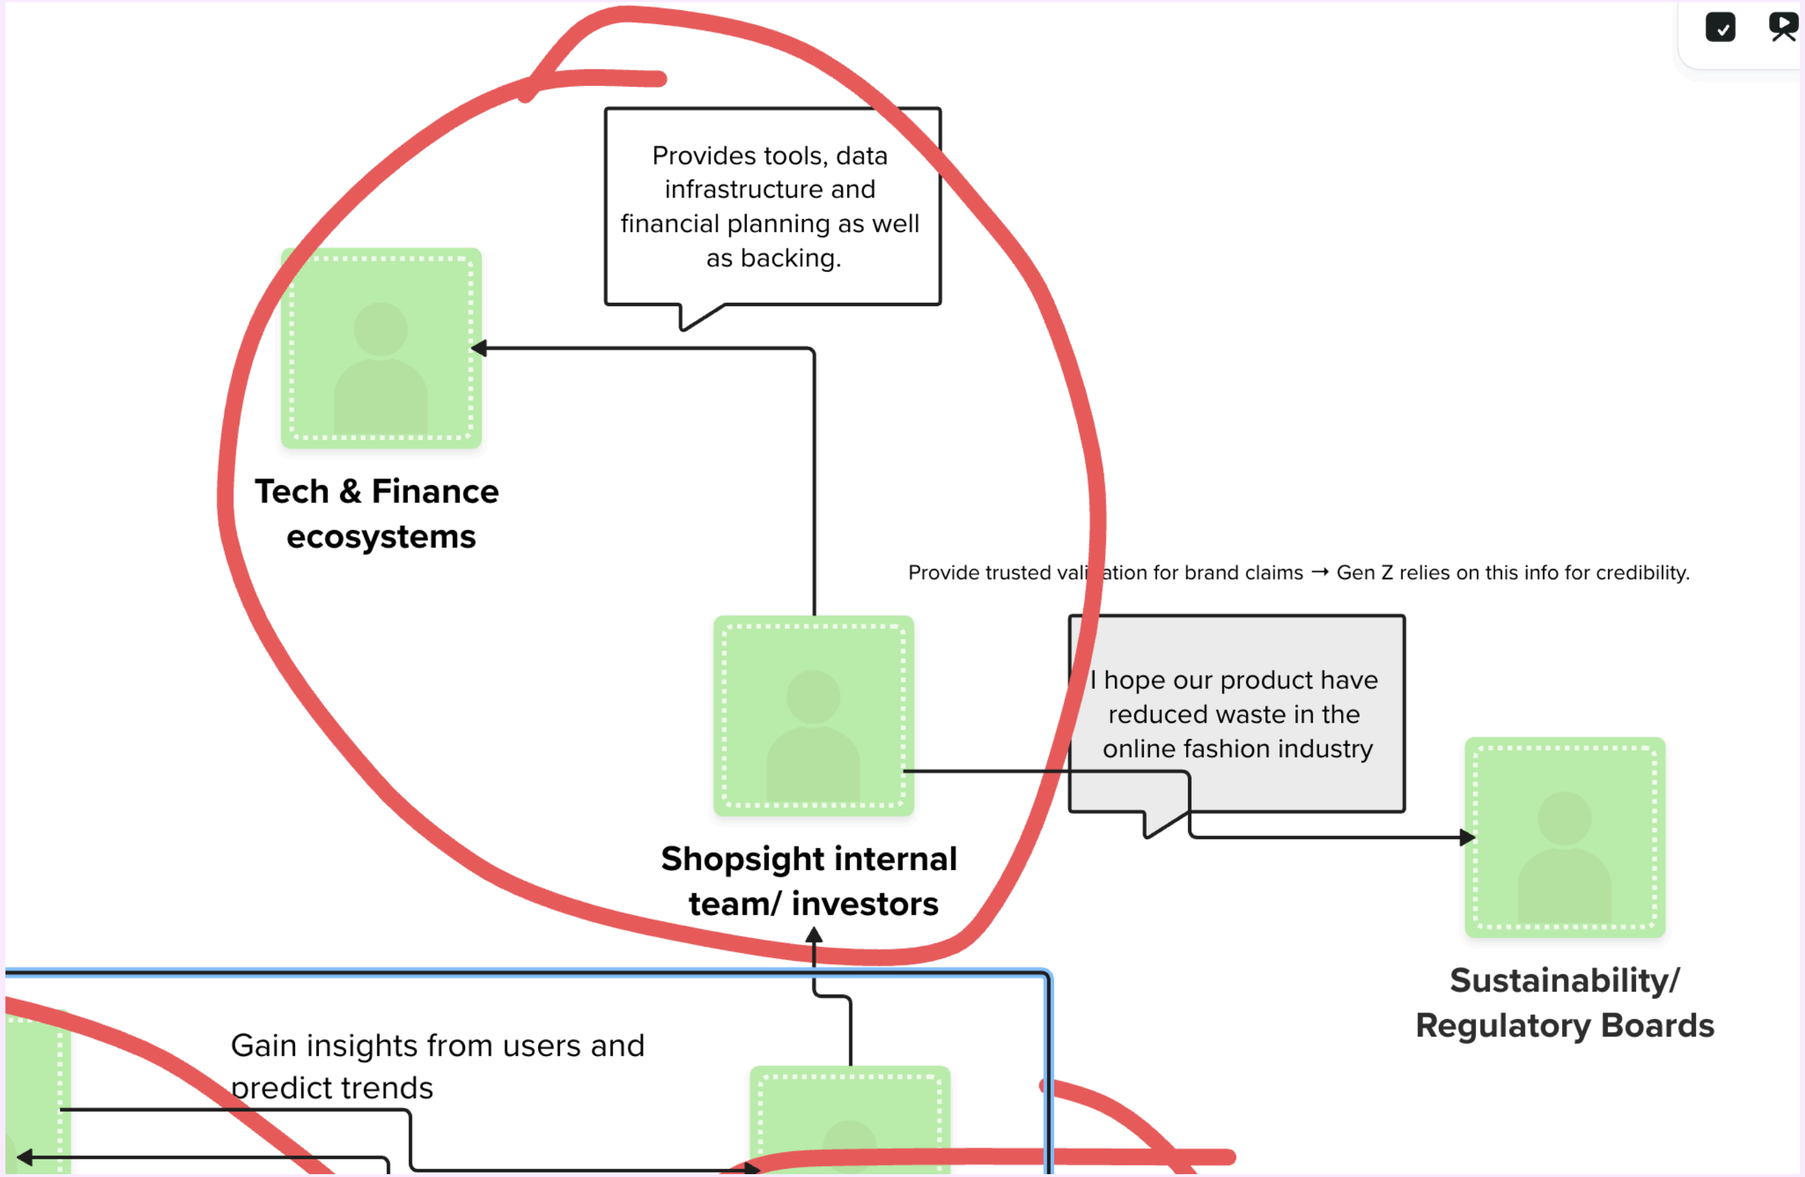
What are their fears, frustrations, and anxieties?
What other feelings might influence their behavior?

- Frustrated when checkout takes too long or requires too many steps.
- Frustrated when delivery fails or return policies aren't clear
- **Frustration** with clunky websites or products with hidden effort

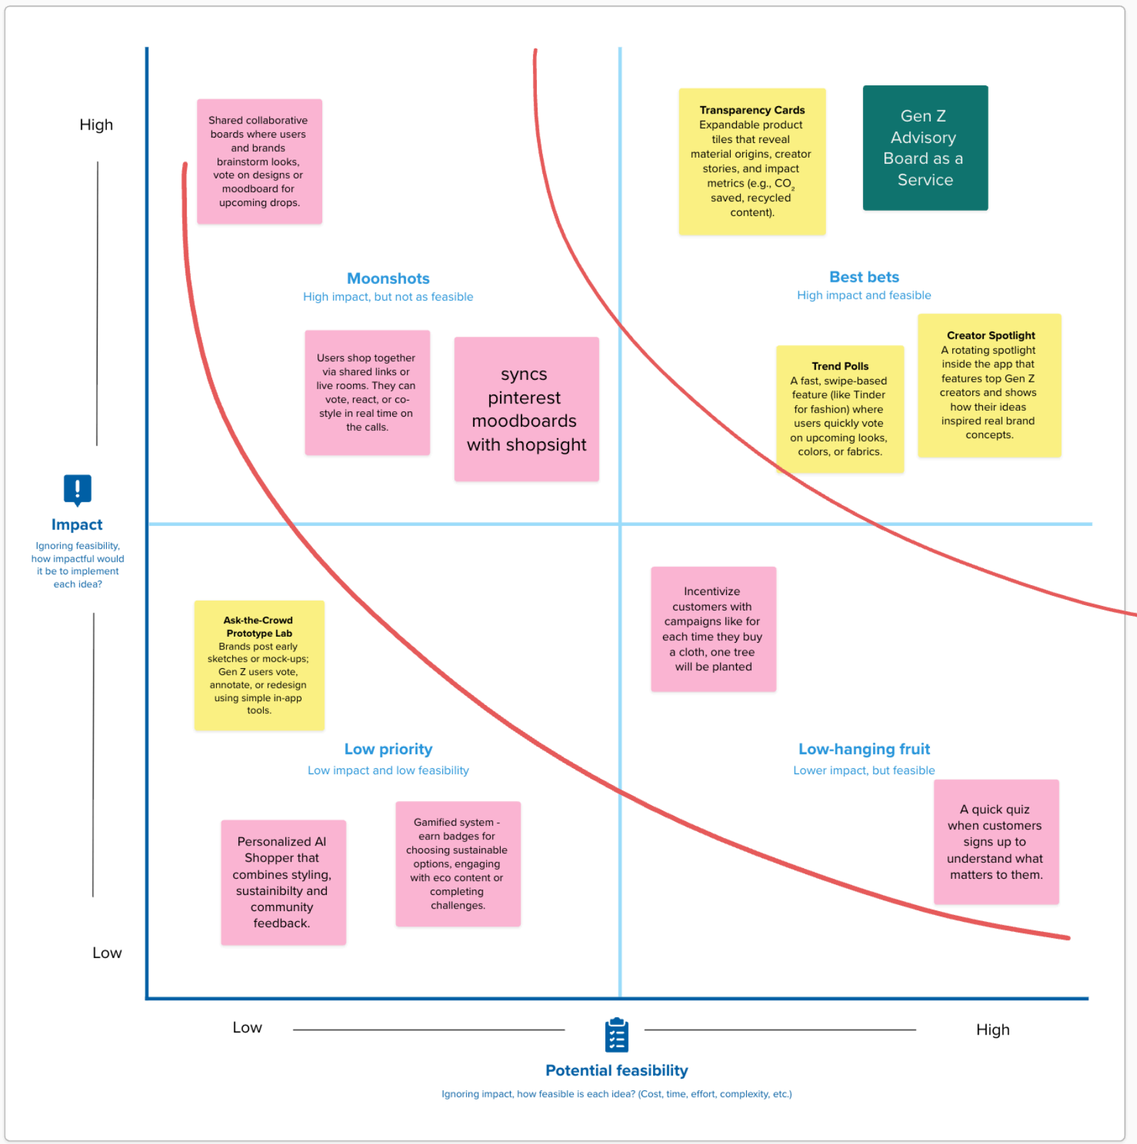
Stakeholder Map



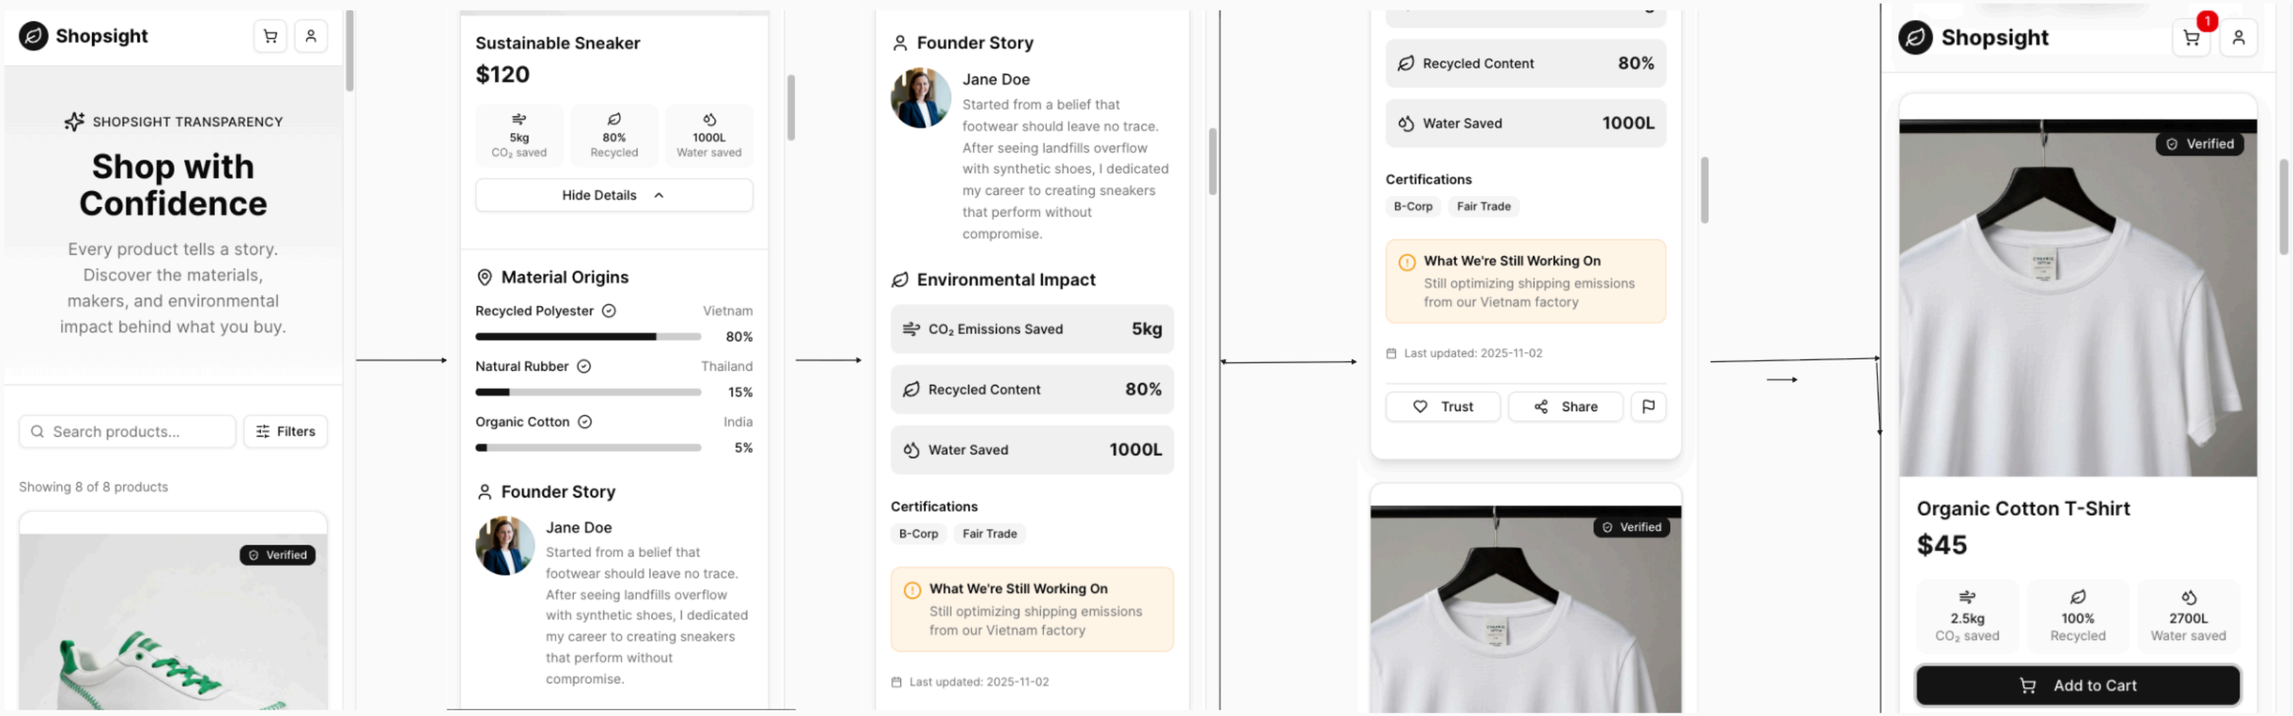
Stakeholder Map



Prioritization Grid



Transparency Cards Prototype



Step 1
Home - Browse Products
User lands on Shopsight product feed. All products display as Transparency Cards (collapsed state).

Step 2
User taps card → smooth animation reveals material origins, founder story, impact metrics, and honest challenge statement.

Step 3
User scans verified badges, compares metrics with competing products, reads founder narrative. Sees trust indicators (3rd-party verified vs. brand-reported).

Step 4
User can like/share card to social, report misinformation, or add to wishlist. Community engagement signals build trust.

Step 5
Decision made confidently → Add to cart. OR collapse card and compare with competitor products on feed.

Storyboard- Trend Polls

Storyboard- Transparency Cards

Napkin Pitch- Idea 1: Trend Polls

BIG IDEA

- Reimagines Gen Z's role in fashion forecasting through swipe-based, visual, and social polls.
- Converts casual engagement into real-time insights, bridging the gap between user expression and brand decisions.
- Creates value by turning everyday digital behavior into a predictive data source for brands.
- A "Big Idea" because it transforms passive scrolling into active cultural participation- fast, intuitive, and emotionally engaging.
- Delivers a "wow" by making forecasting fun for users and actionable for brands.

USABILITY

- Serves two primary users:
  - Gen Z users: Offers quick, low-effort participation that feels fun, social, and creative.
  - Brands: Provides immediate visibility into what designs, materials, and visuals resonate.
- Meets an unmet need by making it easy for users to influence products without content creation pressure.
- Balances the needs of both sides- enjoyable UX for users, actionable insight for brands.
- Transparency is key: users must see how their input informs real brand actions to sustain engagement.
- Risk: If polls feel repetitive, participation could decline- mitigated by visible impact and user recognition.

FEASIBILITY

- Builds on ShopSight's existing Gen Z user base, brand relationships, and data infrastructure.
- Uses lightweight polling, A/B image testing, and simple sentiment-tracking tools built into the current app.
- Early partnerships with fashion schools and emerging brands can seed authentic pilot content.
- Machine learning can identify early aesthetic shifts and surface rising trends before they peak.
- Edge cases like user fatigue can be addressed with rotating question formats, streaks, and gamified incentives.
- Requires minimal new tech investment beyond dashboard integration and visual analytics capabilities.

VIABILITY

- Creates organizational value by boosting daily engagement and positioning ShopSight as the go-to Gen Z trend platform.
- Creates user value by offering influence, recognition, and a sense of creative participation in fashion.
- Helps brands reduce mis-launches and production waste through data-backed creative forecasting.
- Trade-offs include balancing speed and simplicity with depth of insight- can be managed through phased data scaling.
- Likely competitor reaction: imitation through polls, but ShopSight's integrated analytics and co-creation ecosystem provide defensibility.

Napkin Pitch- Idea 2: Transparency Cards

BIG IDEA

- Transforms passive product browsing into active trust-building by revealing what matters most to Gen Z: authentic supply chain origins, real founder stories, and verified impact metrics (CO_2 saved, recycled content %).
- A 'Big Idea' because it flips the power dynamic in shopping. Instead of brands pushing marketing claims, users pull verified truth with one tap.
- It wows based on 3 factors:
  - Visual Storytelling (Maps showing material origin, founder videos).
  - Quantified Impact (Concrete numbers the end users can trust)
  - Vulnerability (brands share one honest challenge they're working on).

USABILITY

- Primary Stakeholders/ Users who would want this would be Gen Z, skeptical of greenwashing and seeking authentic sustainable brands.
- Gen Z users experience 'authentic anxiety', they want sustainable products but don't trust brand marketing. They spend hours researching brands on the internet. Transparency Cards eliminate this friction by surfacing verified data at the point of decision.
- The end users will benefit from this as they become more confident in their purchasing decisions backed by data. Brands get direct access to loyal, conscious customers.
- Shortcomings: Data overload risk, outdated metrics erode trust, accessibility gaps, and brand adoption friction.
- Why it Fails: Fake data destroys credibility, slow performance kills engagement, and competitors copy faster.

FEASIBILITY

- Built on existing strengths: Shopsight's Gen Z user base, brand relationships, and data infrastructure.
- Uses lightweight tools: Expandable UI, real-time data sync, A/B testing already in the app.
- Early partnerships: Emerging sustainable brands (Patagonia, Allbirds, Reformation) seed authentic content.
- Machine learning identifies transparency gaps and surfaces rising sustainability concerns to brands before peaks.
- Edge case: New/transparent brands without full data mitigated by "transparency roadmap" sections showing progress toward goals.
- Minimal new tech investment beyond brand submission portal, auditor API integration, and analytics dashboard.

VIABILITY

- Organizational value: Boosts session time, user retention, and positions Shopsight as a leader in ethical commerce.
- User value: Confident decisions, saved research hours, community impact leaderboards, and wallet voting power.
- Helps brands reduce waste through transparent customer feedback on what sustainability metrics matter most.
- Trade-off: Verified data quality vs. speed to market managed through phased brand onboarding and quarterly re-certification.
- Likely competitor reaction: Fast fashion ignores (low-margin problem). Amazon/Instagram could copy, but lack credibility. Shopsight's Gen Z trust + exclusive partnerships = defensibility.

Napkin Pitch- Idea 3: Creator Spotlight

An in-app feature showcasing top Gen Z creators and how their ideas shape real brand concepts.

BIG IDEA

- Celebrate Gen Z creativity as the driving force behind emerging trends.
- Turn “inspiration” into recognition, link user ideas directly to brand outcomes.
- Showcase co-creation wins where community moodboards become real campaigns.
- Reinforce the brand’s position as a hub for authentic and two-way creation.
- Spark a virtuous cycle: ideas → visibility → validation → more participation.

USABILITY

- Spotlight carousel on home feed and Explore page with dynamic rotation.
- Creator Story cards: swipe through “Inspiration → Concept → Launch.”
- Follow & Remix buttons to encourage peer engagement and UGC.
- Creator badge displayed on their profile and on related brand pages.
- Smart rotation algorithm for diversity across gender, style, geography.
- Filters: “Newest,” “Most Impactful,” “Sustainability-Led,” “Community Pick.”
- Notification loop: “Your idea inspired a new drop!” → drives return visits.

FEASIBILITY

- Built on existing collaboration-board metadata (creator → brand link).
- Uses AI to detect idea influence from boards, comments and trend tags.
- Editorial layer curates weekly spotlights with minimal manual effort.
- Content sourced from already-consented creator submissions.
- Seamless integration with Shopsight’s analytics and reward system.
- API-ready for embedding in brand dashboards and investor reports.
- Scalable: start with one creator per week and expand to themed categories.

VIABILITY

- For brands: tangible proof of authentic co-creation which boosts trust & engagement.
- For creators: visibility, potential collaborations, and portfolio credibility.
- For users: inspiration and motivation to contribute ideas.
- For investors: showcases Gen Z engagement and content efficiency metrics.
- KPIs: creator participation %, brand adoption %, spotlight reach %, ROI uplift.
- Enables sponsorship tiers (e.g, “Brand-Powered Spotlight of the Week”).
- Cross-promote via social snippets (TikTok/IG Reels: “From board → brand”).
