CREATE. SHOP. INFLUENCE

ShopSight

Napkin Pitches

TEAM SHOPFLUENCE: KAREENA SHAH, VEDANT LAKAHANI, SHWETA MITTAL, MICHEL LULO

By submitting this assignment, the members of our team affirm that we all participated in the creation of this document.

Idea 1: Trend Polls

BIG IDEA

- Reimagines Gen Z's role in fashion forecasting through swipe-based, visual, and social polls.
- Converts casual engagement into real-time insights, bridging the gap between user expression and brand decisions.
- Creates value by turning everyday digital behavior into a predictive data source for brands.
- A "Big Idea" because it transforms passive scrolling into active cultural participation- fast, intuitive, and emotionally engaging.
- Delivers a "wow" by making forecasting fun for users and actionable for brands.

USABILITY

- Serves two primary users:
  - Gen Z users: Offers quick, low-effort participation that feels fun, social, and creative.
  - Brands: Provides immediate visibility into what designs, materials, and visuals resonate.
- Meets an unmet need by making it easy for users to influence products without content creation pressure.
- Balances the needs of both sides- enjoyable UX for users, actionable insight for brands.
- Transparency is key: users must see how their input informs real brand actions to sustain engagement.
- Risk: If polls feel repetitive, participation could decline- mitigated by visible impact and user recognition.

FEASIBILITY

- Builds on ShopSight's existing Gen Z user base, brand relationships, and data infrastructure.
- Uses lightweight polling, A/B image testing, and simple sentiment-tracking tools built into the current app.
- Early partnerships with fashion schools and emerging brands can seed authentic pilot content.
- Machine learning can identify early aesthetic shifts and surface rising trends before they peak.
- Edge cases like user fatigue can be addressed with rotating question formats, streaks, and gamified incentives.
- Requires minimal new tech investment beyond dashboard integration and visual analytics capabilities.

VIABILITY

- Creates organizational value by boosting daily engagement and positioning ShopSight as the go-to Gen Z trend platform.
- Creates user value by offering influence, recognition, and a sense of creative participation in fashion.
- Helps brands reduce mis-launches and production waste through data-backed creative forecasting.
- Trade-offs include balancing speed and simplicity with depth of insight- can be managed through phased data scaling.
- Likely competitor reaction: imitation through polls, but ShopSight's integrated analytics and co-creation ecosystem provide defensibility.

Idea 2: Transparency Cards

BIG IDEA

- Transforms passive product browsing into active trust-building by revealing what matters most to Gen Z: authentic supply chain origins, real founder stories, and verified impact metrics (CO_2 saved, recycled content %).
- A 'Big Idea' because it flips the power dynamic in shopping. Instead of brands pushing marketing claims, users pull verified truth with one tap.
- It wows based on 3 factors:
  - Visual Storytelling (Maps showing material origin, founder videos).
  - Quantified Impact (Concrete numbers the end users can trust)
  - Vulnerability (brands share one honest challenge they're working on).

USABILITY

- Primary Stakeholders/ Users who would want this would be Gen Z, skeptical of greenwashing and seeking authentic sustainable brands.
- Gen Z users experience 'authentic anxiety', they want sustainable products but don't trust brand marketing. They spend hours researching brands on the internet. Transparency Cards eliminate this friction by surfacing verified data at the point of decision.
- The end users will benefit from this as they become more confident in their purchasing decisions backed by data. Brands get direct access to loyal, conscious customers.
- Shortcomings: Data overload risk, outdated metrics erode trust, accessibility gaps, and brand adoption friction.
- Why it Fails: Fake data destroys credibility, slow performance kills engagement, and competitors copy faster.

FEASIBILITY

- Built on existing strengths: Shopsight's Gen Z user base, brand relationships, and data infrastructure.
- Uses lightweight tools: Expandable UI, real-time data sync, A/B testing already in the app.
- Early partnerships: Emerging sustainable brands (Patagonia, Allbirds, Reformation) seed authentic content.
- Machine learning identifies transparency gaps and surfaces rising sustainability concerns to brands before peaks.
- Edge case: New/transparent brands without full data mitigated by "transparency roadmap" sections showing progress toward goals.
- Minimal new tech investment beyond brand submission portal, auditor API integration, and analytics dashboard.

VIABILITY

- Organizational value: Boosts session time, user retention, and positions Shopsight as a leader in ethical commerce.
- User value: Confident decisions, saved research hours, community impact leaderboards, and wallet voting power.
- Helps brands reduce waste through transparent customer feedback on what sustainability metrics matter most.
- Trade-off: Verified data quality vs. speed to market managed through phased brand onboarding and quarterly re-certification.
- Likely competitor reaction: Fast fashion ignores (low-margin problem). Amazon/Instagram could copy, but lack credibility. Shopsight's Gen Z trust + exclusive partnerships = defensibility.

Idea 3: Creator Spotlight

An in-app feature showcasing top Gen Z creators and how their ideas shape real brand concepts.

BIG IDEA

- Celebrate Gen Z creativity as the driving force behind emerging trends.
- Turn “inspiration” into recognition — link user ideas directly to brand outcomes.
- Showcase co-creation wins where community moodboards become real campaigns.
- Reinforce the brand’s position as a hub for authentic and two-way creation.
- Spark a virtuous cycle: ideas → visibility → validation → more participation.

USABILITY

- Spotlight carousel on home feed and Explore page with dynamic rotation.
- Creator Story cards: swipe through “Inspiration → Concept → Launch.”
- Follow & Remix buttons to encourage peer engagement and UGC.
- Creator badge displayed on their profile and on related brand pages.
- Smart rotation algorithm for diversity across gender, style, geography.
- Filters: “Newest,” “Most Impactful,” “Sustainability-Led,” “Community Pick.”
- Notification loop: “Your idea inspired a new drop!” → drives return visits.

FEASIBILITY

- Built on existing collaboration-board metadata (creator → brand link).
- Uses AI to detect idea influence from boards, comments and trend tags.
- Editorial layer curates weekly spotlights with minimal manual effort.
- Content sourced from already-consented creator submissions.
- Seamless integration with Shopsight’s analytics and reward system.
- API-ready for embedding in brand dashboards and investor reports.
- Scalable: start with one creator per week and expand to themed categories.

VIABILITY

- For brands: tangible proof of authentic co-creation which boosts trust & engagement.
- For creators: visibility, potential collaborations, and portfolio credibility.
- For users: inspiration and motivation to contribute ideas.
- For investors: showcases Gen Z engagement and content efficiency metrics.
- KPIs: creator participation %, brand adoption %, spotlight reach %, ROI uplift.
- Enables sponsorship tiers (e.g, “Brand-Powered Spotlight of the Week”).
- Cross-promote via social snippets (TikTok/IG Reels: “From board → brand”).
