Tinder's Date Plan Assistant : NOVA

By Shweta Mittal

LIP challenge 3/5

But first...

Who is Nova?

Hi I'm Nova!

I am Tinder's smart, in-app date planning assistant designed to help matches move from chatting to meeting effortlessly.

Powered by AI, I curate personalized date suggestions based on users' moods, preferences, and location. Unlike a chatbot, I ain't for conversation, I am a focused utility that **simplifies** decision-making, reduces friction, and helps matches turn mutual interest into memorable real-world moments.
With me, planning a date becomes quick, collaborative, and fun, all within the Tinder experience.

Jobs to be done

1. When I...
start chatting with someone on Tinder and we're both interested in meeting in person,

2. But...
I feel overwhelmed by all the options, unsure of what would be fun or convenient for both of us,

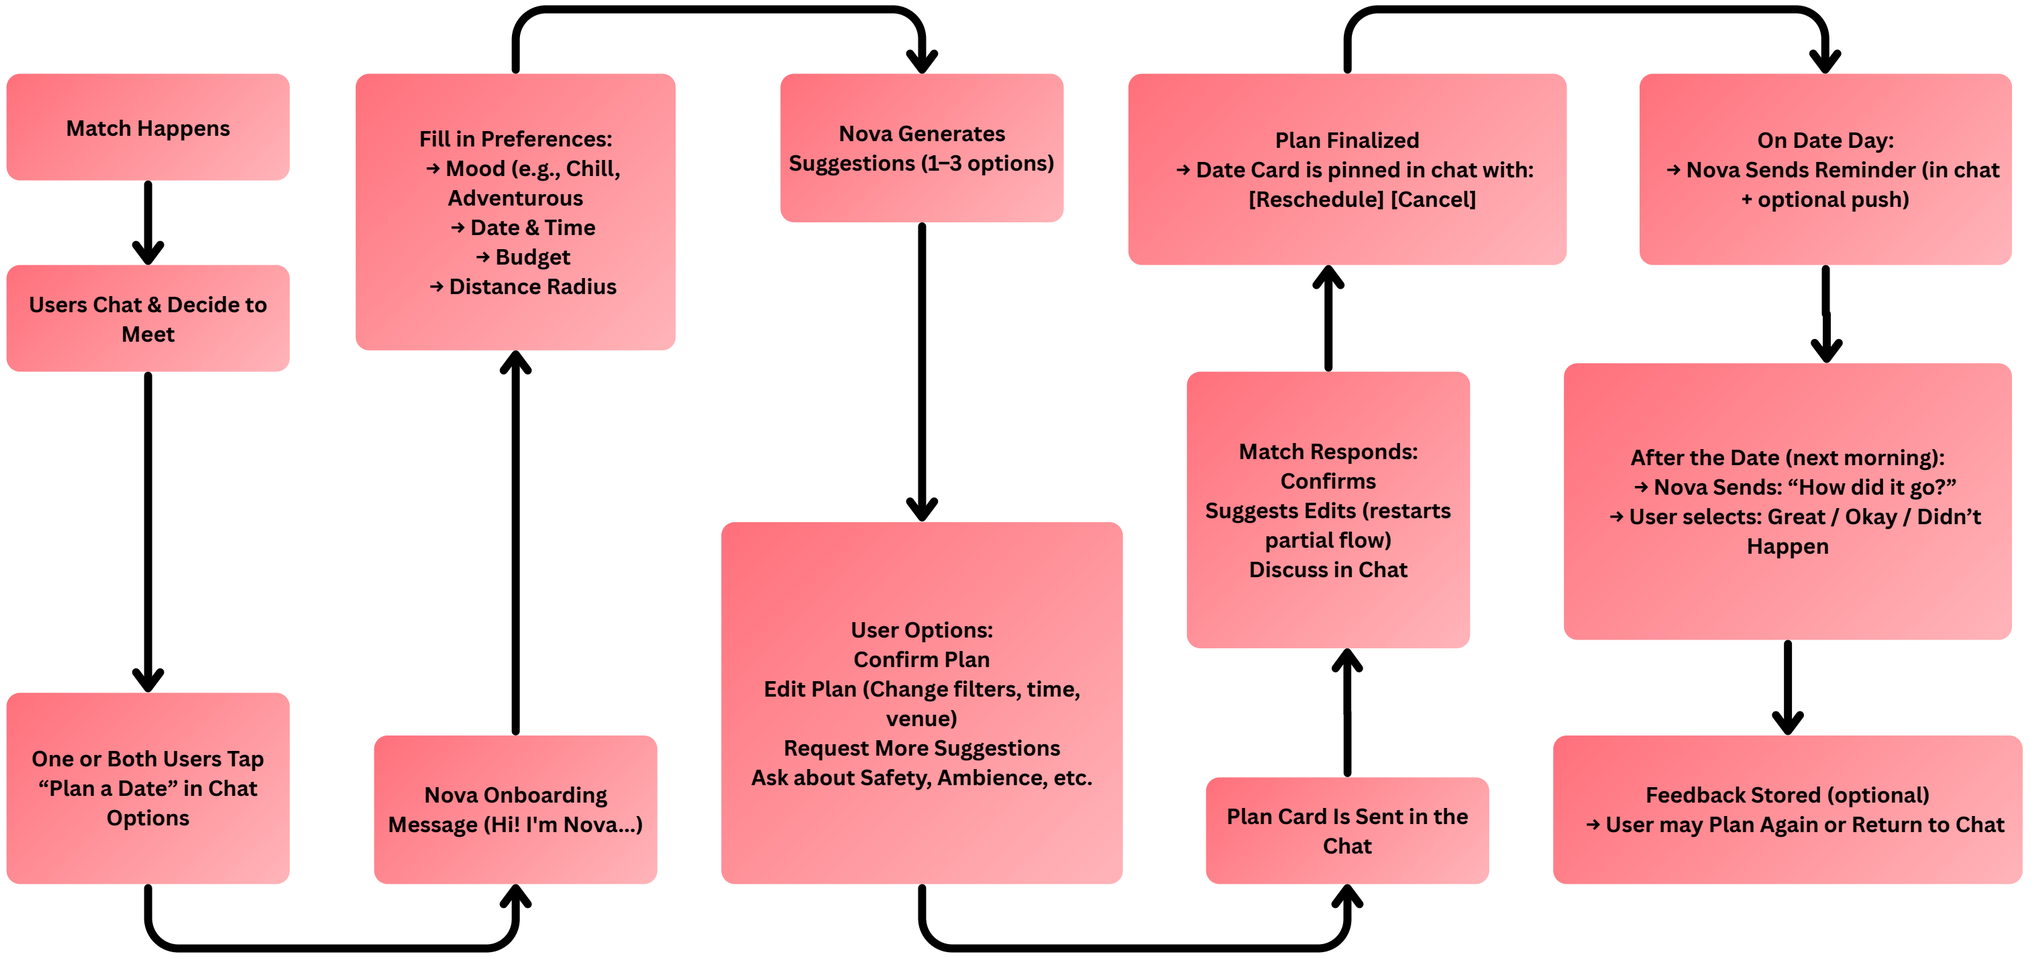

3. Please help me...
quickly suggest a date idea that matches our vibe, location, and time preferences,

4. So I...
can confidently move the conversation forward and turn our match into a real-life meeting.

Desired Outcome
Help users confidently turn a promising match into a real-life date — faster, with less effort, and without awkwardness

GIF Type anything... **Send**

User Flowchart

How will users discover this feature?

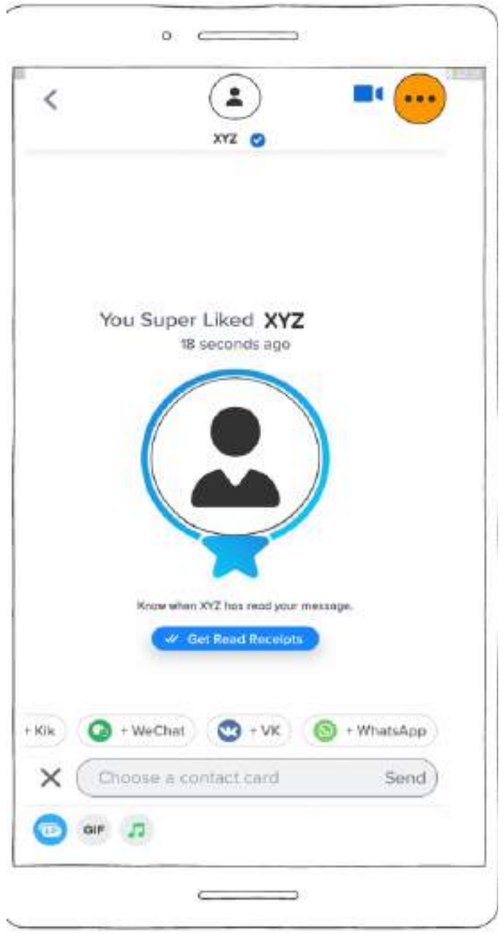

Natural Trigger Points:

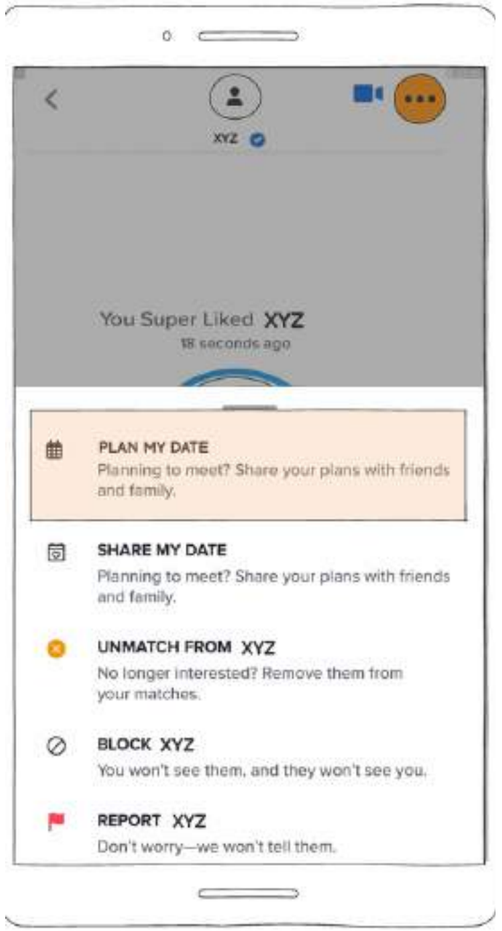

The conversation reaches a planning moment

One person expresses indecision or asks for a suggestion

A match goes stale after early excitement

Nova appears just in time

GIF Type anything... **Send**

How Will Conversations with Nova Start?

1. Manual User Initiation ("Plan with Nova")

When: One user wants to suggest a date

How: A small “Plan with Nova” button appears in the chat bar or overflow menu

- Tapping it triggers:

“Hey! I'm Nova, here to help you plan a fun date with [Name]. Ready to get started?

2. Automatic Prompt After Date Interest Detected

When: Tinder detects that both users are expressing interest in meeting (keywords like “coffee?”, “let’s hang”, “you free this weekend?”)

Nova auto-appears in chat with:

“Looks like you're thinking about meeting up! Want a hand planning something together?”

🧿 [Yes, Help Me] 🧿 [Not Now]

3. Re-engagement for Incomplete Plans

- When: A user starts planning but abandons mid-way, Nova prompts after ~24hrs:

“Still up for planning something fun with [Name]? I can pick up where we left off.”

🧿 [Resume Planning] 🧿 [Dismiss]

4. Tinder-Initiated Nudges (Optional Feature)

Where: Tinder Home or Chat screen

“Some matches spark. Want to meet one IRL? Let Nova help plan a date with [Match Name]”

🧿 [Start with Nova]

Conversation Use Cases for Nova

1. Standard Use Case – Planning a Date Together
TRIGGER: Both users express interest in meeting
FLOW:

- Nova asks for vibe/mood
- Suggests 2–3 curated venues or ideas
- Users can edit or confirm
- A “Date Card” is created and shared in chat

OUTCOME: Date planned collaboratively

2. One-sided Initiation
TRIGGER: Only one user initiates Nova
FLOW:

- Nova collects preferences from initiator
- Sends a suggestion as a card to the match
- Match can tap “I’m in” or “Suggest edits”

OUTCOME: Allows asynchronous planning

3. Parallel Conversations (Multiple Matches)
CHALLENGE: User planning with multiple matches
Flow:

- Each Nova instance is tied to a specific match thread
- Assistant only suggests venues in relation to that chat
- “Ongoing Plan” label appears next to chats with active Nova sessions

OUTCOME: Scoped per chat; avoids confusion

4. Error Case – No Available Venues
TRIGGER: API fails / low-quality results for preferences or time
FLOW:

- Nova returns: Couldn’t find a great fit nearby right now, want to widen your area or try a different vibe?”
- Option to retry or skip

RECOVERY: Keep user in flow with alternatives

5. Mismatch in Preferences

TRIGGER: Users have conflicting inputs (e.g., one wants "chill", other wants "adventurous")

FLOW:

- Nova summarizes mismatch:
- “Looks like you’re feeling different vibes — want me to suggest something in between?”
- Presents compromise ideas
- Recovery: Smart merge suggestions (e.g., relaxed live music bar)

6. User Tries to Chat With Nova

TRIGGER: User types something like “Hey Nova, what’s your favorite place?”

Flow:

- Nova responds clearly but briefly:
- “I’m not a chatbot, but I can help suggest places based on your preferences!”
- Boundaries: Set clear role without breaking immersion.

7. User Cancels or Abandons Mid-way

TRIGGER: Leaves Nova flow before confirming

FLOW:

- Option to “Resume Planning with Nova” appears later
- Conversation retains a soft bookmark or message reminder:
- “Still want to make a plan with [Name]? Pick up where you left off.”

8. User Wants to Edit or Reschedule

TRIGGER: After confirming a date

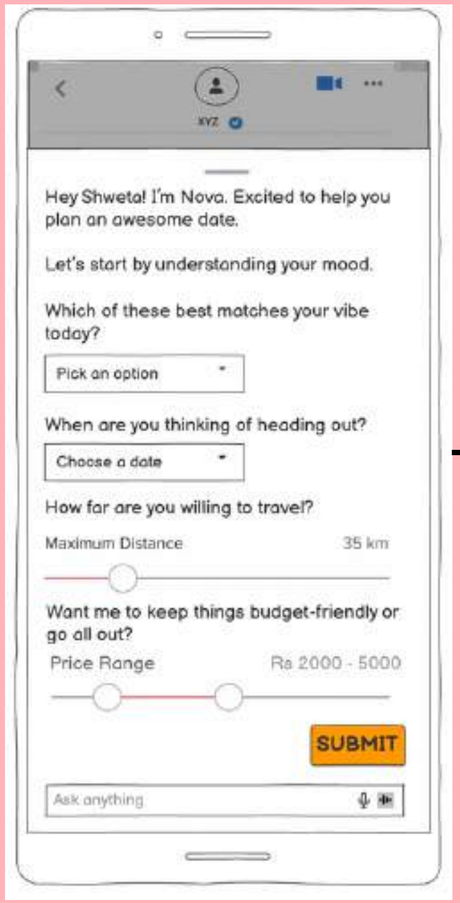

FLOW:

- Tap “Edit Plan” on the Date Card
- Nova re-runs planning with updated inputs
- Support: Dynamic, editable date suggestions

Nova's Post-Date Follow-Up Flow

How Will Previous Conversations Be Stored?

Storage Model: Per-Match Thread

- Nova is integrated within each chat thread (not a separate inbox).
- Each Nova session is tied to a specific match, just like how you remember where you left off in a DM.

How It Works for Users:

- Nova-generated “Date Cards” are pinned inside the chat like rich messages.
- Users can tap on the card to view/edit/resume previous planning.
- If a plan was started but not finished, a “Resume Planning with Nova” banner or prompt appears in the thread.
- If a plan was completed, Nova may add a small "🗓️ Planned with Nova" badge or history log below the card.

Data Included in the Stored Session:

- Mood/vibe selections
- Location + time prefs
- Suggested options and user responses
- Final confirmed plan (or draft)
- Optional post-date feedback

💡 Think of it like how Spotify remembers your last playlist queue — Nova remembers the last planning context per match.

UI Elements & UX Flows for Familiarity

Your Stay Inside the Chat Thread text

- All Nova interactions happen inside the match conversation, no separate assistant UI.
- Suggestions appear as interactive chat cards, not a new window.

Use Tinder's Existing Visual Language

- Cards look like swipe cards or Spotify song shares
- Colors, fonts, and buttons match Tinder’s design system
- Nova avatar is clean, simple — not overly “robotic”

Conversational, Not Chatty

- Nova speaks in short, clear, actionable text (not long paragraphs).
- Avoids feeling like a chatbot, more like a system-level smart helper (like a Siri push-in)

Interactive Date Cards

- Tappable cards for suggestions: show venue name, rating, time, image, distance
- Actions: • Confirm • Edit • Cancel
- Visual hierarchy favors the plan, not Nova

Familiar Prompts

Users see Tinder-like modals/ popups for:

- “Pick a vibe for your date”
- “Choose a time that works for you”
- “Here's what Nova found nearby”

Re-entry Points

- Banner at top of chat: “Planning with Nova — resume?”
- Tinder home screen module: “You’ve got a date planned for today”
- Notification: “Want to plan something with [Name]?”

THANK YOU!

Thank you for taking the time to explore Nova — Tinder's step toward making meaningful connections easier to bring to life. Whether it's a chill coffee or a bold adventure, Nova is here to make "Let's go on a date" feel effortless, exciting, and just a little bit magical.
