Insights from User Research

Problem Framing

Targeted User Segment

Age group: 25–34 years

Location: Metro cities (Tier 1: Mumbai, Delhi, Bangalore, etc.)

Profile: Working couple or bachelors living alone

Behavior: Ordering **once a week** (~4 times/month)

AOV: ₹1300–₹1400 → Driven from AOV of big basket's customers for slot deliveries.

Need: Understand what's stopping them from using **scheduled delivery**

Size Estimate

Metric	Value	Assumptions
Total population (25–34 yrs) in India	~190M	Census, 2021 est.
% living in metro cities (Tier 1)	~20% → 38M	Top 8 cities
% working couples / singles	~35% → 13.3M	NSSO urban household data
% using online grocery services	~30% → 4M	Redseer, Bain reports
% ordering once a week (4x/month)	~45% → 1.8M	Bain & Co.
% **not using scheduled delivery**	**~68% → 1.22M**	Survey

Why This Segment?

Age group: 25–34 years

- **Largest market share** in food delivery.
- **Busy work lives** and long office hours mean they **don't have time** to shop physically, even if they want to.
- **More Likely to Plan**, Not Rely on Others.
- **Perfect Fit** for Scheduled Delivery — But Not Using It.
- **Digitally Savvy**, **Habit-Driven**, and **Influential.**

Key Research Questions

✔ **Awareness**

Do users know about the scheduled delivery option?

✔ **Slot Visibility**

Are available delivery slots clear and convenient?

✔ **Convenience**

Is scheduling seen as more or less convenient?

✔ **Trust**

Do users trust Zepto to deliver on time?

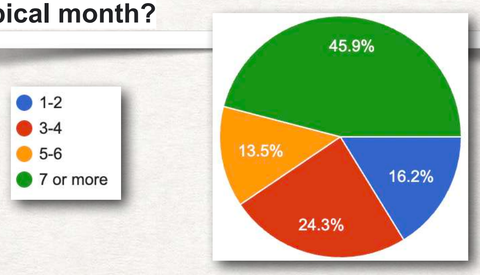

✔ **Alternatives**

What other methods do users use instead?

Key Insights from User Survey

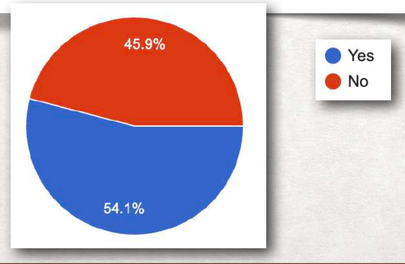

How many times do you order from Zepto in a typical month?

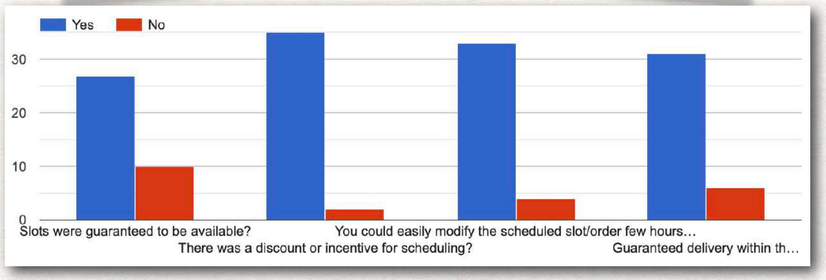

How important is flexibility (ability to order anytime & get it fast) in your Zepto shopping experience?

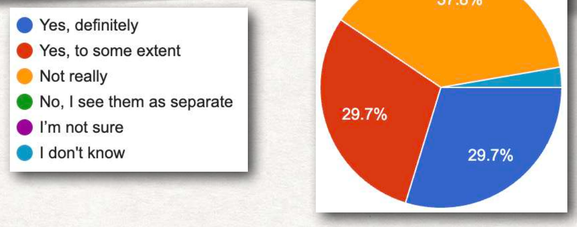

Do you feel **scheduling your order is less convenient than instant delivery?**

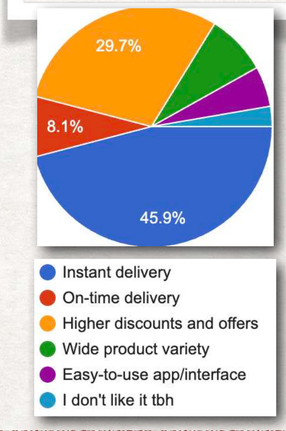

Would you be **willing to schedule your deliveries** if:

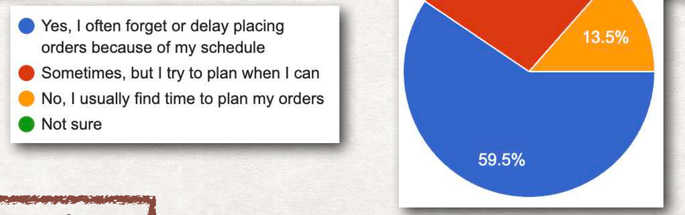

Do you think **delays in instant** delivery **affect your trust** in **scheduled delivery** being on time?

What do you **like the most** about Zepto?

Do you think your **busy schedule** makes it **difficult** to **plan your grocery** orders in **advance?**

63% of users do not plan their orders.

Key Insights from User Interview

Mahvish Ayesha, Homemaker
Pune | 33 yrs old | Married

Quote: If I need to schedule, I would rather visit Physical Store. Better to get it quick, rather than to keep check and track for a longer time range.

Habit: Use delivery apps only for urgent needs. (Orders 4 times a week)

Painpoint: Doesn't trust that SD will be as reliable.

Yamini M., Software Engineer
Bangalore | 28 yrs old | Unmarried

Quote: For the time slots, I have to actively stay on alert wether or not I have recived the order.

Habit: Doesn't enjoy congnitive load of scheduling. (Orders 8 times a week)

Painpoint: Feels friction in planning ahead.

Key Drivers for opting Scheduled delivery:

- Discount incentives
- No various types of delivery charges.
- Guranteed delivery.
- Wide range of products

User Segmentation → Insights from User Research → Problem Framing

What is the true problem?

Scheduled delivery increases cognitive load and feels uncertain, while instant delivery offers psychological relief, even when the need isn't urgent.

Who are the customers facing the problem?

Working professionals(age 18–34) living in metro cities, can't reach to physical stores and rely heavily on online shopping.

How do we know it is a real problem?

Survey shows ~68% of frequent users avoid scheduled delivery despite availability

What is the value generated by solving this problem?

For the target customers

Solving this makes scheduled delivery feel as rewarding as instant — with less stress, more control, and smarter planning.

For the business

Incremental annual revenue.

Why should we solve this problem now?

Rising Cost Pressure on Instant Delivery Models. Habit Loops Can Be Rewired. Users can switch behaviors when there's: Clear incentives, Predictability & Less friction.
